

Architectural Concept & Structural Realisation

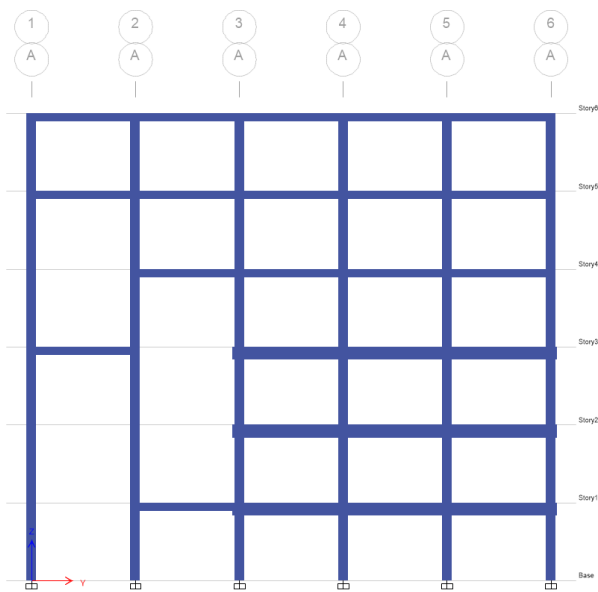

G+5 office building project (Project ID – 17199925)

A composite structure combining **steel framing with reinforced concrete elements** to achieve an efficient and buildable structural system. The work reflects the transition from architectural concept to approved structural layout and analytical modelling, with emphasis on structural stability, framing logic, and coordination between design and realisation.

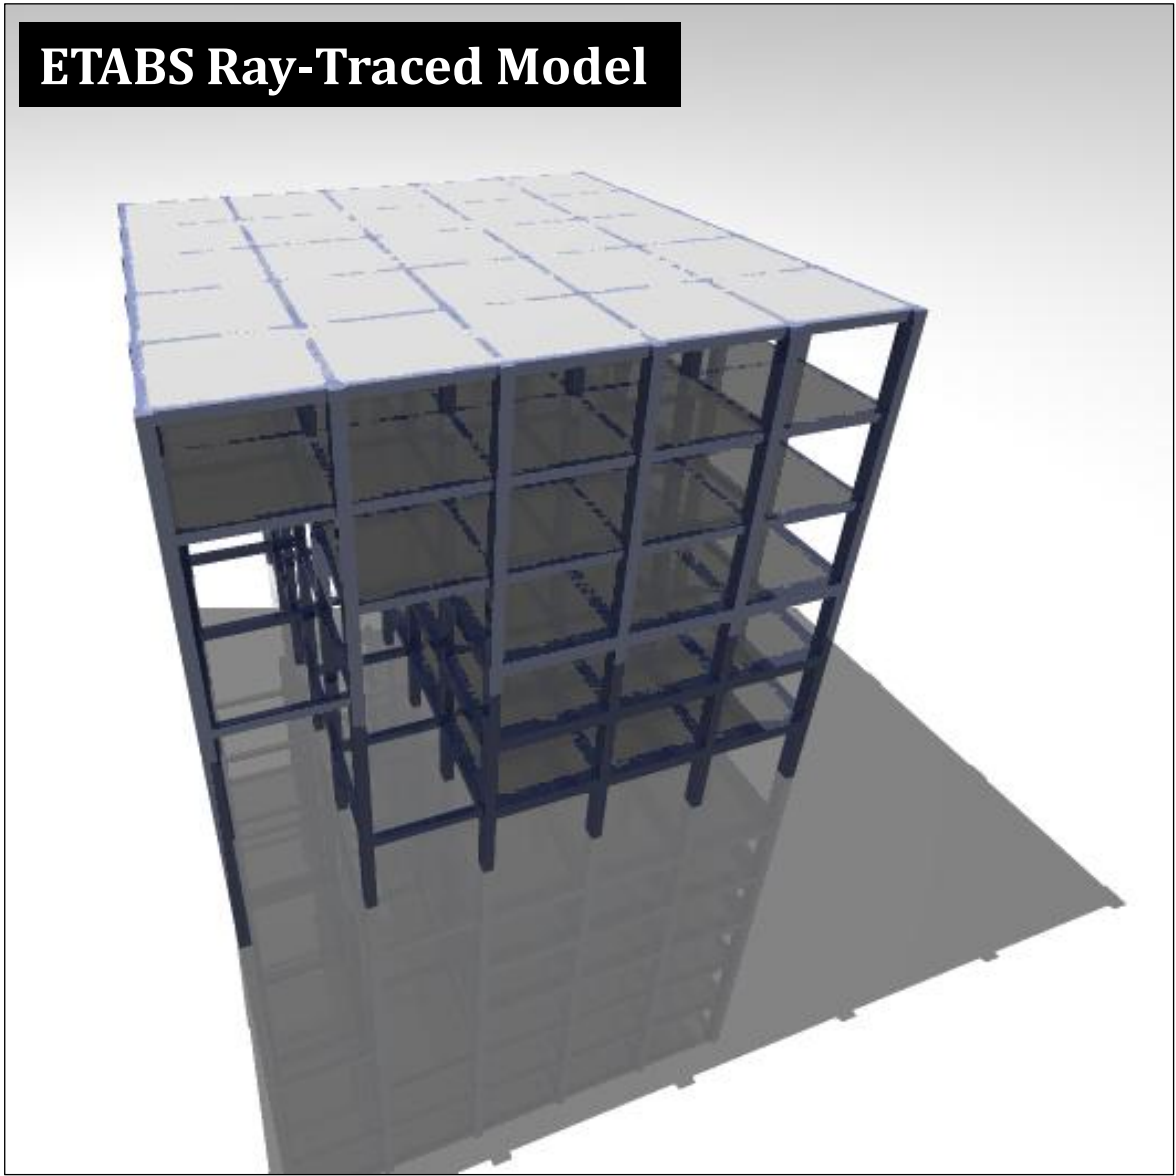

Approved structural scheme, analytical model, and render.

Analytical bending moment distribution highlighting critical beam and frame regions for structural verification.

East elevation.

Structural design by
Vasu Sharma

Due to client and company confidentiality, detailed structural drawings, calculations, project locations, member sizes, and design data cannot be disclosed. The visuals presented here are approved, anonymised representations of selected architectural and structural workflows, showing the development from concept design to structural modelling and approved scheme visualisation.
